

IT'S HERE!

A Built-In Total Cleaning System for the difficult demands in cleaning

RESTAURANT & FOOD SERVICE ESTABLISHMENTS

Dry Vacuum

Quick Spill Pick Up!

Kitchen Floor Cleaning

Carpet Cleaning

Upholstery Cleaning

The **AQUA-AIR Wet/Dry[®]** introduces state-of-the-art technology to drastically improve the appearance and sanitation of your restaurant by removing the soils and contaminants completely out of the environment, and flushing them directly down the drain. A hot cleaning solution is sprayed on the surface then immediately rinsed and vacuumed away leaving the surface clean, residue-free and dry.

The **AQUA-AIR Wet/Dry[®]** will:

- Vacuum carpet & hard surface floors
- Clean carpets
- Clean tile & grout, stone & hardwood floors
- Sanitize kitchens & bathrooms
- Control odors
- Clean up spills & accidents
- Clean upholstery
- Dust and more...!

Eliminate the antiquated cleaning processes of heavy portable vacuums, unsanitary mops and buckets, brooms and dusters that redistribute soils and contaminants back into the environment; by installing an AQUA-AIR Wet/Dry[®] in your restaurant. The simple, fast and effective system drastically cuts labor and equipment expenses.

Convenient Inlets/Outlets Cleaning Stations

AQUA-AIR[®]

Wet/Dry[®]

Built-In
Total Cleaning System

The Most Complete Restaurant Cleaning. . .

ALL WITH ONE SYSTEM

The AQUA-AIR Wet/Dry[®] is the central vacuum system that will simultaneously clean wet and dry. This one system will replace your vacuums, mops, buckets, scrub brushes and carpet cleaners. The advanced cleaning process of the AQUA-AIR will clean your restaurant FASTER, QUIETER, AND BETTER.

CLEANS FASTER

You'll cut your cleaning time, because the AQUA-AIR Wet/Dry[®] does in one step what other cleaning methods normally do in three or four.

All tools and hoses are ready to clean by simply plugging them into the wall outlets. This means no more buckets to fill or equipment to set up and clean up. When finished, simply unplug the hose/ tool and return to its storage rack, there is no other equipment to deal with and your cleaning is complete.

CLEANS QUIETER

The power unit is located in a utility area allowing you to clean up spills and debris without disturbing customers. Vacuum motors are muffled and exhausted to the outside, eliminating noise and vapors.

CLEANS BETTER

Unlike conventional cleaning methods, the AQUA-AIR Wet/Dry[®] sprays a hot cleaning solution on the floor and simultaneously scrubs, vacuums and dries, removing all soils and contaminants off the floor and out of the environment by flushing them directly down the drain.

This advanced cleaning system replaces the ineffective methods of upright vacuums, mops and buckets and carpet shampooers.

ABOUT THE SYSTEM

The central power unit is hung on a wall in a remote area of the restaurant, usually in an equipment room or custodial closet. This eliminates noise and allows operation any time of day.

Convenient wall-mounted cleaning stations (as shown on front page) are located throughout the restaurant. Vacuum and water tubing are run from either inside or on the surface of the wall back to the power unit. The power unit, inlet/out-

lets cleaning stations and tubing are easily installed in new construction or existing buildings.

The cleaning tools and hoses are hung on racks or stored on shelves until needed. The whole system is always ready for "on demand" cleaning by simply inserting hoses into the wall mounted cleaning stations. There is absolutely no set-up or clean-up required, just plug in and clean, and when finished unplug hose and return to their storage area. After screening out the debris, the dirty water is automatically disposed of down the drain.

INSTALLATION

Utility Requirements

- **ELECTRICAL:** 120VAC 15 or 30 amperes
- **WATER:** Hot and cold with shutoff.
- **DRAIN:** 2" DWV to sewer
- **EXHAUST** 2" to outside
- The power unit is to be located in an area where it is protected from freezing. It should be exhausted to the outside using as direct a route as possible.
- The power unit should be drained into a 2" DWV stand-pipe connected via a P-trap directly to the sanitary sewer (A floor drain could also be used.)

Vacuum Inlet / Water Outlet

- **Vacuum Piping:** Standard 2" PVC and fittings are used (May use aluminum piping through fire-code regulated areas.) A P-trap is installed for outlets piped up to overhead lines. Existing piping installations may require some modifications.
- **Water Lines:** 3/8" or 1/2" PEX, or copper (1/4" or 3/8" PVC braid reinforced hose on surface mounted installations)
- **Vacuum Inlets:** Standard vacuum inlets are used with rust resistant contact pins to the top. (No 'Super valves')
- **Water Outlets:** Mounting plates with a hydraulic style quick disconnect and a modified matching vacuum inlet are used for in wall installations.
- A combined vacuum inlet/water outlet with switch is used for surface mounted piping

“Touch-Less Cleaning”

With the AQUA-AIR Wet/Dry[®] Built-in Cleaning System

Touch-less cleaning is now a fairly common phrase used in the janitorial industry. Most often relating to cleaning toilets or other restroom and kitchen fixtures and floors. Touch-less means the person doing the cleaning doesn't have to touch the fixture with their hands, but rather is able to clean them, and clean them well, using tools and wands, rather than rags and mops.

Most of us in the cleaning industry have experienced the unsanitary environment of public use restrooms and commercial kitchens. In fact, you don't need to be from the industry to know this, there have been many restrooms I've walked into and decided that I could wait a little longer because the facilities were disgusting. With this in mind, consider the unfortunate employee, or custodian assigned to clean them, with only a rag, brush and mop.

Not only is it unsettling to get down on your hands and knees to clean around toilets and floors, it is ineffective. Mops, rags and the buckets of water they're rinsed in are dirty and contaminated. The more the worker uses the fabrics the dirtier they get and the more cross-contamination to other surfaces occurs. They also don't clean in the cracks, crevices and grout lines that hold the odor-causing bacteria. Because it is miserable and difficult work, they are rarely cleaned correctly, so the soil and bacteria continue to grow as well as the customer complaints.

If you are faced with difficult cleaning challenges of restrooms and kitchens, consider the “touch-less” cleaning of the Aqua-Air Wet/Dry[®] built-in cleaning system. Throw away unsightly and unsanitary mops, buckets, rags, and hand them the “touch-less cleaning tools of Aqua-Air Wet/Dry[®] consisting of a spray gun and the “3 in 1” (wash, rinse and dry) cleaning wands.

In a recent letter from the owner of Quizno's sandwich shop, he wrote: *“Our employees appreciate the touch-less cleaning of toilets, sinks and back splashes, it's no longer the most dreaded chore at night, and the restrooms have never looked better.”*

The Aqua-Air Wet/Dry[®] also incorporates an automatic discharge feature that sends all recovered soil and dirty water directly down the drain, no more tanks to fill, empty or clean.

In addition to the touch-less cleaning features of the Aqua-Air it also has all the regular vacuuming capabilities of a traditional dry only central vacuum. With the added benefit of water filtration so even the dry soils and dust go directly down the drain. Note that the system incorporates a nylon net debris screen to keep larger items (i.e. diamond rings, coins, paper clips, etc.) out of the sewer system and in compliance with local city sanitation departments.

The Aqua-Air Wet/Dry[®] Built-In Cleaning System cleans everything better, faster and quieter!
