# “Touch-Less Cleaning”

*With the  
AQUA-AIR Wet/Dry<sup>®</sup> Built-in Cleaning System*

Touch-less cleaning is now a fairly common phrase used in the janitorial industry. Most often relating to cleaning toilets or other restroom and kitchen fixtures and floors. Touch-less means the person doing the cleaning doesn't have to touch the fixture with their hands, but rather is able to clean them, and clean them well, using tools and wands, rather than rags and mops.

Most of us in the cleaning industry have experienced the unsanitary environment of public use restrooms and commercial kitchens. In fact, you don't need to be from the industry to know this, there have been many restrooms I've walked into and decided that I could wait a little longer because the facilities were disgusting. With this in mind, consider the unfortunate employee, or custodian assigned to clean them, with only a rag, brush and mop.

Not only is it unsettling to get down on your hands and knees to clean around toilets and floors, it is ineffective. Mops, rags and the buckets of water they're rinsed in are dirty and contaminated. The more the worker uses the fabrics the dirtier they get and the more cross-contamination to other surfaces occurs. They also don't clean in the cracks, crevices and grout lines that hold the odor-causing bacteria. Because it is miserable and difficult work, they are rarely cleaned correctly, so the soil and bacteria continue to grow as well as the customer complaints.

If you are faced with difficult cleaning challenges of restrooms and kitchens, consider the “touch-less” cleaning of the Aqua-Air Wet/Dry<sup>®</sup> built-in cleaning system. Throw away unsightly and unsanitary mops, buckets, rags, and hand them the “touch-less cleaning tools of Aqua-Air Wet/Dry<sup>®</sup> consisting of a spray gun and the “3 in 1” (wash, rinse and dry) cleaning wands.

In a recent letter from the owner of Quizno's sandwich shop, he wrote: *“Our employees appreciate the touch-less cleaning of toilets, sinks and back splashes, it's no longer the most dreaded chore at night, and the restrooms have never looked better.”*

The Aqua-Air Wet/Dry<sup>®</sup> also incorporates an automatic discharge feature that sends all recovered soil and dirty water directly down the drain, no more tanks to fill, empty or clean.

In addition to the touch-less cleaning features of the Aqua-Air it also has all the regular vacuuming capabilities of a traditional dry only central vacuum. With the added benefit of water filtration so even the dry soils and dust go directly down the drain. Note that the system incorporates a nylon net debris screen to keep larger items (i.e. diamond rings, coins, paper clips, etc.) out of the sewer system and in compliance with local city sanitation departments.

The Aqua-Air Wet/Dry<sup>®</sup> Built-In Cleaning System cleans everything better, faster and quieter!
