**A Built-in Total Cleaning System
that will Simultaneously Clean Wet and Dry**

Dry Vacuum

Quick Spill Pick Up

Hard Floor Cleaning

Carpet Cleaning

Auto Interiors

The AQUA-AIR Wet/Dry® uses the most advanced cleaning method available today.

The AQUA-AIR Wet/Dry® is the answer for all your home and business cleaning needs. This system will vacuum every surface in your home with 100% dust filtration and can immediately be used to clean those same surfaces with a warm water extraction. Simply spray a mild

cleaning solution on the surface then rinse and vacuum away leaving surface clean, residue free and dry. After screening out debris, the dirty water is safely flushed down the drain. All vapors and odors are exhausted outside the facility.

A Completely Automated Built-in Cleaning System for

HOMES

RESTAURANT and FOOD SERVICE

HEALTH and DAY CARE CENTERS

APARTMENTS and MOTELS

VETERINARY CLINICS

AUTO DEALERS and DETAIL SHOPS

Environment friendly cleaning for the 21st Century

AQUA-AIR Wet/Dry®

Built-In
Total Cleaning System

PATENTED

Model 130 shown
Other models
available.

Made in USA

The Aqua-Air Wet/Dry® is the built-in central vacuum system that does a whole lot more than just vacuum. Traditional central vacuum systems can vacuum dry soils and that's it! Of course the Aqua-Air Wet/Dry® vacuums dry soils, but check out the other cleaning possibilities below.

DRY VACUUMING

The Aqua-Air Wet/Dry® uses powerful vacuum motors and the latest in tools and attachments for maximum removal of dust, grit, hair, dander, and all other dry particulate soils. As the dry soils are removed from the surface and pass through the vacuum tubing they enter our exclusive water and cyclonic separation process. This process automatically screens out larger debris while flushing all dirty water and soils down the drain. In addition, vacuum motors are exhausted outside giving you 100% dust-free filtration.

EMERGENCIES & ACCIDENTS

Have you experienced food and beverage spills in your home, business or automobile? Even worse, how about pet accidents, vomit, clogged sinks, flooded carpets, etc? These are definitely unpleasant to clean up and many times cause permanent damage if left unattended too long.

The Aqua-Air Wet/Dry® lightens the burden of these problems. Simply choose the appropriate attachment, treat with the Aqua-Air cleaning solution, then rinse and vacuum away contaminants. Surface will be clean, residue/odor-free and dry (or slightly damp). All contaminants go directly into the sewer without handling. No towels, sponges or gloves required!

CARPET CLEANING

Clean your carpets at your convenience. You can clean the whole house, one room or spot at a time. There is no bulky equipment to set up, fill, empty or clean up. Simply plug your carpet cleaning wand and hose into the wall outlet and clean away.

The Aqua-Air system features the Hot/Warm Water Extraction Process, recommended by most major carpet manufacturers. An Aqua-Air mild prespray is applied to the carpet then rinsed and extracted, removing moisture and soil. Carpets normally dry in two to six hours.

TILE OR STONE FLOORS

Tile or stone floors have never been easier to clean; simply spray a mild Aqua-Air cleaning solution, then extract cleaner and soil with the brush and squeegee tool. The soft brush will get into grout lines and crevices that normally trap soil, then the vacuum and squeegee lift the soil out and dry instantly. Throw away those mops and hand brushes.

HARDWOOD FLOORS

Hardwood floors last longer and look better using the Aqua-Air system. Abrasive soils (that brooms miss) scratch surfaces and soap residues from household cleaners prematurely yellow and degrade the urethane finishes on wood. Using the Aqua-Air vacuum and extraction process minimizes abrasive soil and completely eliminates chemical residues.

UPHOLSTERY / AUTO INTERIORS

Upholstered furniture and auto interiors will always look new! Whether you just take a spot out or clean the whole piece, you can keep your furnishing fresh and clean. Spilled drinks, grease and oil spots are common occurrences in automobiles. The convenience of Aqua-Air allows quick removal effortlessly!

INSTALLATION

Utility Requirements

- ELECTRICAL: 120VAC 15 or 30 amperes
- WATER: Hot & cold with shutoff and backflow preventer.
- DRAIN: 2" DWV to sewer
- EXHAUST 2" to outside
- The power unit is to be located in an area where it is protected from freezing. It should be exhausted to the outside using as direct a route as possible.
- The power unit should be drained into a 2" DWV standpipe connected via a p-trap directly to the sanitary sewer (A floor drain could also be used.)

Vacuum Inlet / Water Outlet

- Vacuum Piping: Standard 2" PVC and fittings are used (May use aluminum piping through fire-code regulated areas.) A P-trap is installed for outlets piped up to overhead lines. Existing piping installations may require some modifications.
- Water Lines: 3/8" or 1/2" PEC, (1/4" or 3/8" PVC braided hose on surface mounted installations) or copper.
- Vacuum Inlets: Standard vacuum inlets are used with the contact pins on the top. (No 'Super valves')
- Water Outlets: Mounting plates with a hydraulic style quick disconnect and a modified matching vacuum inlet are used for in wall installations.
- A combined vacuum inlet/water outlet with switch is used for surface mounted piping

The Aqua-Air Wet/Dry® Built-In Total Cleaning System is truly Fantastic!
