

SPIRAL-FLUSH

TUBING SYSTEMS by AQUA-AIR

“SPIRAL-FLUSH” TUBING SYSTEMS as designed and installed by your AQUA-AIR Wet/Dry[®] installation technician eliminates clogging and build-up on the interior of the tubing.

The spiraling airflow causes the interior walls of the tubing to be continuously flushed each time the system is used for wet cleaning.

The use of approved AQUA-AIR Wet/Dry[®] Cleaning Solutions assures that dirt or debris will not stick to the piping when dry vacuuming after wet cleaning.

It is recommended that by sucking up a few gallons of water the piping, hoses and tools be periodically flushed.
