MORE THAN... "A GREAT BUILT-IN VACUUM SYSTEM"

Traditional built-in central vacuum systems are great for vacuuming dust and dirt from carpets, hard-floors, upholstery and fixtures. But that's all they can do is vacuum dry soils.

The AQUA-AIR Wet/Dry[®] Built-In Total Cleaning System is the latest technology in central vacuum systems. An AQUA-AIR system not only can handle all your vacuuming needs but can also clean with hot water and vacuum away any water-based soils all with the same system.

A CLEANER, HEALTHIER HOME WITH THE AQUA-AIR WET/DRY[®]

Vacuum and dust any surface or fixture in your home, with the light-weight hose and easy to use attachments. The AQUA-AIR Wet/Dry[®] eliminates the heavy, air-polluting upright vacuum cleaners of the past. All soils are filtered by water and automatically flushed down the drain while exhaust and vapor are vented to the outside, giving you a 100% dirt and dust filtration.

Deep clean your carpet the way the professionals do it with the Hot Water Extraction Process (recommended by most carpet manufacturers). Your carpets will always look good, be sanitary and free of chemical residue.

The convenience of quick connect attachments allow you to clean a small room or the whole house, you choose. No set up or clean up of equipment is required, hot cleaning water is on demand and recovered soils automatically flushed down the drain without any handling.

EXPERIENCE THE BENEFITS OF NO-TOUCH CLEANING WITH THE AQUA-AIR WET/DRY[®]

Tile, hardwood and stone floors will look better and last longer when cleaned regularly by the AQUA-AIR Wet/Dry®. The system will keep abrasive soil to a minimum and eliminate chemical residues that damage floors.

The one-step process will vacuum, clean, rinse and dry the floor all with the same tool. You can now get rid of ineffective brooms, and dirty old mops that redistribute soil!

Pet accidents? Sick kids? Spills from the party? These emergencies or the everyday spot and spill can cause permanent staining and damage to carpet and other surfaces if left unattended. The AQUA-AIR Wet/Dry® hand tool makes these messes a breeze to remove. Soils and bacteria are extracted and rinsed from the surface and automatically flushed down the sewer. No sponges, towels, nose plugs or gloves required! The AQUA-AIR can even handle clogged sinks and flooded floors.

CLEANS FASTER

You'll cut your cleaning time because the AQUA-AIR does in one step what other cleaning methods normally do in two or three.

CLEANS QUIETER

The power unit is located away from living areas to eliminate the loud noise common to regular vacuums and steam carpet cleaners.

CLEANS BETTER

Unlike conventional home cleaning methods, AQUA-AIR has a spray-on cleaning solution followed immediately with a rinse and a suction squeegee to dry. All soils, bacteria and pollutants are removed completely out of home.

If you're interested in an easier way to keep your home cleaner and healthier, the AQUA-AIR Wet/Dry® is the answer.

Easily installed in new or existing homes. Or upgrade your current vacuum system to an AQUA-AIR Wet/Dry®.

The most Advanced Built-In Cleaning System Available!

The central vacuum system that will clean wet and dry.

The power unit is hung in an out-of-the-way area and then convenient inlet/outlets are plumbed throughout the entire building.

Great for homes.... (see inside brochure) and businesses.

The AQUA-AIR is also ideal for the difficult demands of cleaning:

- Restaurants
- Nursing Homes
- Day Care Centers
- Veterinary Clinics
- Auto Dealer & Detail Shops
- Office Buildings
- Hotels and Motels
